

CSCI 421 – Final Ethics Paper Guidelines

The final paper (10–15 pages) analyzes a real or emerging technology through ethical frameworks and proposes a responsible course of action.

Required Elements

1. Clear ethical dilemma. 2. Application of at least two ethical frameworks (Rawls required). 3. Consideration of societal and individual impacts. 4. Economic value analysis. 5. Defensible conclusion.

Economic Value Consideration

Students should evaluate costs, benefits, efficiency, and long-term economic consequences. Economic benefit alone does not justify harm, but it is a relevant moral consideration in policy and design decisions.

Goal

The goal is ethical clarity, not moral certainty. Papers should demonstrate careful reasoning and responsible judgment.
